Let's Start!

Let's go to the museum to see the dinosaurs!

Learning Outcome

Describe detailed facts about events or actions in work and social contexts, in written or spoken situations.

Can Do Statements

- I can talk about history and civilization.
- I can report facts about events or actions.
- I can talk about unusual events in the past.

Ask your partner:

- What do you know about dinosaurs?
- Where can you see dinosaur bones in your city or country?

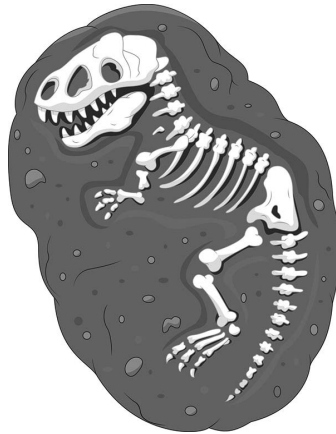

Let's Explore!

I have to admit I'm a **dinosauraholic***!

* "Dinosauraholic" is a made-up word that means the person can't get enough of dinosaurs.

Instructions: Read the text aloud.

I guess we have all been impressed by dinosaur skeletons in a museum, at one time or another. I suppose I have seen more of these than most, being a 'dinosauraholic' from an early age.

Have you ever wondered how much scientists have discovered about the animals that walked the earth in past millennia? Now scientists feel that they have found a new way of learning about dinosaurs. They imagine that they have the ability to understand more about dinosaurs from their eggs.

The first dinosaur remains were documented by scientists in Britain in 1820. It was presumed then that dinosaurs were reptiles and that they laid eggs. The first dinosaur eggs were found in France in the year 1859.

At 12 inches long, and 10 inches wide, these are still the biggest eggs ever found. Since then, I suppose thousands of eggs have been found, but scientists have only now started to decipher their meaning.

Then, a female dinosaur carrying an egg in her body was uncovered. This was a rare find. It showed that dinosaur eggs, like bird eggs, were laid one at a time. Nests were also made by dinosaurs. Scientists think that many of these nests were watched by the parent dinosaur and that the young were cared for when the eggs hatched.

One dinosaur egg was recovered with a perfectly shaped dinosaur inside. Now we know exactly how a baby dinosaur looked. Dinosaur specialists think that perhaps they had feathers. This may help answer the question of whether dinosaurs were warm-blooded, like birds, or cold-blooded, like reptiles.

Let's Practice!

Did you know that the first dinosaur was discovered in 1820?

Instructions: Read the sentences. Select the correct option to complete each sentence. Read the sentences aloud. Compare your pronunciations with a partner. Check your pronunciation with your instructor.

1. The first dinosaur remains _____ by scientists in Britain in 1820.
 - a. were documented
 - b. was documented
 - c. was document
2. It _____ then that dinosaurs were reptiles and that they laid eggs.
 - a. is presume
 - b. was presumed
 - c. were presumed
3. Then, a female dinosaur carrying an egg in her body _____.
 - a. were uncovered
 - b. was uncover
 - c. was uncovered
4. It showed that dinosaur eggs, like bird eggs, _____ one at a time.
 - a. were lay
 - b. was laid
 - c. were laid
5. The nests _____ by the parent dinosaur.
 - a. was watched
 - b. were watched
 - c. was watch

Let's Practice!

Here is more information about dinosaurs!

Instructions: Organize the mystery sentences.

1. specialists / think / feathers. / had / perhaps / they / that / Dinosaur

2. egg / with / One / a / dinosaur / was / perfectly / inside. / dinosaur / recovered / shaped

3. more / ability / their / from / to / have / eggs. / imagine / the / about / they / They / dinosaurs / understand / that

4. female / her / an / body / in / a / was / carrying / Then, / egg / uncovered. / dinosaur

5. found. / still / 10 / ever / eggs / biggest / are / inches / and / the / these / long, / wide, / At / 12 / inches

Extension Activity

Watch a dinosaur film.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Watch a blockbuster movie or documentary featuring dinosaurs.
- While you are listening, collect 15 to 20 words that are related specifically to the topic of dinosaurs.
- Look the words up, write their meaning and a sentence using the word.
- Discuss your ideas on dinosaurs and the film using reporting verbs.
- Teach your new words to your partner.

Self-Assessment

Yes No

I watch a film featuring dinosaurs.

☐ ☐

I collect words that are related specifically to the topic of dinosaurs.

☐ ☐

I write the words, their meanings and use them in sentences.

☐ ☐

I discuss my ideas on the film I watched.

☐ ☐

I use reporting verbs and the Simple Past Passive where possible.

☐ ☐

I share my new words with my partner.

☐ ☐

Target Words

- dinosaur** (noun): an animal from the Triassic period
e.g. The first dinosaur remains were documented by scientists in Britain.
- skeleton** (noun): the bones which provide support to an organism
e.g. We have all been impressed by dinosaur skeletons in a museum.
- millennia** (noun): more than one period of a thousand years
e.g. Have you ever wondered how much scientists have discovered about the animals that walked the earth in past millennia?
- to presume** (verb): to think that something is true without knowing it's true
e.g. It was presumed that dinosaurs were reptiles and that they laid eggs.
- to decipher** (verb): to clarify the meaning of
e.g. Thousands of eggs have been found, but scientists have only now started to decipher their meaning.
- to uncover** (verb): to expose by removing a covering
e.g. A female dinosaur carrying an egg in her body was uncovered.
- to hatch** (verb): to break out of an egg
e.g. Scientists think that many of these nests were watched by the parent dinosaur and that the young were cared for when the eggs hatched.
- warm-blooded** (adjective): having a body temperature higher than their environment
e.g. Were dinosaurs warm-blooded, like birds, or cold-blooded, like reptiles?
- cold-blooded** (adjective): having a body temperature that adjusts to the environment
e.g. Were dinosaurs warm-blooded, like birds, or cold-blooded, like reptiles?
- reptile** (noun): an animal that has a body temperature varying with that of the environment
e.g. It was presumed then that dinosaurs were reptiles and that they laid eggs.

Learning Points

Simple Past Passive to Report Events

You use the Simple Past to talk about finished events at a particular time in the past. You use the Simple Past Passive when you want to focus on the action that is done to the subject.

You form the passive by using **was/were + past participle**. The doer or agent of the action is either not known or not mentioned as the receiver of the action is more important to the context.

*The first dinosaur eggs **were found** in France in the year 1859.*

Sometimes you use the preposition 'by' to mention the person or thing that did the action.

Examples:

- *It was presumed then that dinosaurs were reptiles and that they laid eggs.*
- *Then, a female dinosaur carrying an egg in her body was uncovered.*
- *It showed that dinosaur eggs, like bird eggs, were laid one at a time.*
- *Nests were also made by dinosaurs.*
- *These nests were watched by the parent dinosaur and the young were cared for when the eggs hatched.*

Learning Points

Reporting Verbs

You use the verbs *think*, *suppose*, *guess*, *imagine*, *feel* and *wonder* to report on what you know.

All of these verbs are variations on the verb *think*. Let's look at the uses of each of these verbs.

Verb	Use	Example
think	You hold an impression or have an opinion on something.	<i>I think I have always been interested in dinosaurs.</i>
suppose	You think about something in a tentative way. It is often used in a negative context.	<i>I suppose I have seen more of these than most being a 'dinosauraholic' from an early age.</i>
guess	You are not absolutely sure an idea or opinion about something is correct.	<i>I guess we have all been impressed by dinosaur skeletons in a museum, at one time or another.</i>
imagine	If you imagine something, you create a picture in your mind.	<i>They imagine that they have the ability to understand more about dinosaurs from their eggs.</i>
feel	If you use intuition and emotion rather than only logic, you feel.	<i>Now scientists feel that they have found a new way of learning about dinosaurs.</i>
wonder	If you wonder, you are curious and want to know more.	<i>Have you ever wondered how much scientists have discovered about the animals that walked the earth in past millennia?</i>
